

# MAKE YOUR FARM FUTURE PROOF

**NEDAP  
COWCONTROL®**

# NEDAP COWCONTROL®

a single, reliable system for optimum performance of all your animals

## NEDAP COWCONTROL®

The benefits:

- Find your cow quickly
- Better fertility results
- Improved health
- Easy management
- More profit

Nedap COWControl ensures that you are in control of all your cows 24/7. With a simple and clear interface for smartphone, tablet or desktop, you can quickly switch between all your activities every day; you can inseminate, monitor and draw up and implement treatment plans. Giving cows the attention they require in a quick and targeted manner, using the most accurate localisation available, and you will never have to search again.

CLOUD  
SUPPORT

### LOCALISATION

The best localisation system for your cows

### HEAT DETECTION

Most accurate heat detection in the world 24/7, with display of optimum insemination time

### EATING & RUMINATION MONITORING

Two unique behavioural measurements, combined for optimum health monitoring

### STANDING & LYING MONITORING

Two unique behavioural measurements, combined for optimum health monitoring

### ISO IDENTIFICATION

The only reliable solution for identification in all your management applications, it works all the time

# ***"The work is now done much more quickly"***

**Frisian Klaas Ane Jellema has a dairy farm in Sweden with 400 cows. Since 2013, the dairy cows have been housed in a shed with 6 robots and completely free cow traffic.**

The milking went smoothly from the start, but heat detection and tracking down cows became more and more of a stumbling block for Klaas Ane and his three employees. Technology from Nedap provided a solution. Klaas Ane: 'Thanks to Nedap COWControl, I can save lots of time every day; things are a lot more efficient.'

According to Klaas Ane, they really had been waiting for such an all-in-one system, including localisation, for years. 'I always inseminate the cows myself, twice a day. But insemination used to take 20 minutes per cow. Now I or my employees can check the app on the barn phone to see where exactly they are in the barn. I can prepare the straw and then walk straight over to the animal. It saves 10 minutes searching for each cow, and that adds up nicely with the current numbers.' Based on 400 cows and 1.5 inseminations, he is hoping to save 100 hours per year, calculated in money: 2,500 euros.
