Nedap Now combines the accuracy and reliability of Nedap CowControl with the processing power and scalability of cloud computing. It unlocks new possibilities in cow and herd management:

Benefits at a glance

- ✓ Access data 24/7/365 from anywhere.
- ✓ Attain seamless integration with herd management systems and third-party stakeholders.
- ✓ Access more historical data over longer periods of time.
- ✓ Create customized work lists with relevant insights for each team member.
- ✓ Allow selective access to data for team members or third-party consultants.
- ✓ Combine data in one spot for improved analysis and insights.
- ✓ Quickly identify anestrus cows or potential pregnancy losses.

“We use the data to make informed decisions, use preventative strategies and be more proactive with our management. Where previously we would have to be reactive to an event, like a group of cows with lower milk production, now we can get in front of a situation. And with the cloud, we can access this data whenever we need, no matter where we are.”

Megan Schrupp, NexGen Dairy LLC
